

## **Question:**

Calculate how long it takes for the object to travel from New York to Los Angeles at the current speed.

## **Ground Truth:**

The current speed of the object is 19.23 km/h, and the distance from New York to Los Angeles is 4,492.3 km, so it would take approximately **233.6 hours**.

## ⑤ GPT-4V:

... assuming an actual speed, say about 30 mph (just a hypothesis without actual measurement from the image), ... would be **92.97 hours** ...

## ST-VLM (Ours):

The given object's speed is 19.62 km/h. The distance between New York and Los Angeles is 4,345 kilometers. ... approximately **222.92 hours** ...
